Perfectly designed for B2B ecommerce

The SwiftCloud B2B Mobile App is both highly sophisticated and well established. Mimicking the functionality of EDI ordering, the software integrates directly into existing ERP systems so clients can have their own fully functional branded app in Google Play and the App Store. The App is personalised using company colours and logos. A natural extension of the client's brand. This allows our clients to always be readily available 24/7 whenever their customers need them.

- Complex Configurations
- Importing orders from CSV files
- Customisable
- Shopping Lists
- Seamless Integration
- Lightning Fast
- Stock Checking
- History
- Favourites
- PDF's
- Product Information
- Special Offers
- Promotions
- 24/7 Ordering

For those customers who prefer to order via a desktop computer, or want to switch between devices, the SwiftCloud Web Portal is the perfect solution. The Web Portal automatically syncs with your SwiftCloud App, your ERP system and any other SwiftCloud modules you may want to add-on.

There are plenty of features of the SwiftCloud Web Portal for both you and your customers to benefit from such as:

- Complex Configurations
- Importing orders from CSV files
- Customisable
- Shopping Lists
- Seamless Integration
- Lightning Fast
- Stock Checking
- History
- Favourites
- PDF's
- Product Information
- Special Offers
- Promotions
- 24/7 Ordering

Boost your Sales Managers productivity with the SwiftCloud Sales Manager App. The ultimate tool for Sales Managers, whether dealing with accounts internally or out in the field.

Using the SwiftCloud Sales Manager App, your sales team will always have complete control over their accounts, whenever and wherever it suits them, allowing for complete mobility and flexibility to drive sales whilst offering exceptional customer service.

- Lightning Fast
- SwiftChat
- Meeting Notes
- Flawless User Experience
- Account Management
- Customer Onboarding
- Price Override Function
- 24/7 Ordering
- Custom Branding
- Send and Share Files
- Product Information
- Special Offers
- Promotions
- Seamless Integration

When a customer sends an order through to your business via email, it is often the case that the order will be keyed in manually by a member of your team. SwiftCloud's Email Ordering eliminates the need for manual inputting by pulling data from your customer's order and placing it in your ERP, whether it be a text file, PDF or even a word document.

- Latest technology
- Email to ERP
- Complete Integration
- Lightning fast
- Eradicate errors
- Optical Character Recognition
- Robust and Secure
- Simple 24/7 ordering

The process of inputting orders via telephone can sometimes be slow or cumbersome. The SwiftCloud Telesales Portal will ensure that your sales team are working to the best of their ability with our lightning-fast digital order experience.

The SwiftCloud Telesales Portal allows your sales team to input orders instantly, unlike some of the systems often used by businesses where several screens are needed resulting in a time consuming and clumsy process for their sales team.

- Fast Order Entry
- Time Saving
- Complete Integration
- Price Override
- Accessible Anywhere
- Winning User Experience
- Single Screen Interface
- Fast Product Search
- Product Catalogue
- Promotions
- Meeting Notes
- Reorder from History

Sell directly to customers with the SwiftCloud B2C app. Available as an add on to the SwiftCloud B2B ordering app or as a stand-alone platform. If you're already selling to the trade, with SwiftCloud you can now unlock the ability to sell to both businesses and the consumer using one on unbeatable, custom branded B2C app.

- Push Notifications
- Offers and Promotions
- Check Out and Pay
- Custom Branding
- Favourites
- Barcode Scanning
- SwiftChat
- Winning Customer Experience

Advertise and communicate to your customers with ease.

- Complete control over which customers receive the push notifications and what communication they receive.
- Schedule sends or send out instantly.
- Perfect for special offers, new stock or seasonal promotions.
- User friendly interface which allows for tracking, reporting and analysis.

The new SwiftCloud quotation feature allows your customers to request quotes in no time!

With the quotation feature, your customers can build an order as usual, and then request a quoted price.

Once the quote has been requested you can respond with the appropriate pricing.

Quotes will then be sent directly back to the customer for rejection or approval, before the order is processed.

Allow your customers to apply parameters and privileges with the PO Authorisation feature.

When multiple customers from a single business are placing orders, parameters can be set to ensure an order is approved by management before its processed.

There can be a set value in place before orders have to approved. For example, if it is only the orders large in value size that need approval, a limit can be set e.g. £100.

Alternatively, if **ALL** orders need to be approved, the limit can be set at a default of £0.
